

Milk reception unit

Air elimination ASU unit

Reception units

Our reception unit is a basic unit configured to your specific needs and preferences.

The unit can handle milk in quantities to suit your requirements, and it ensures that the milk received is correctly treated from the start. Accordingly, it can be supplied with a cooling section and measuring equipment. The unit is, of course, set up for CIP Cleaning.

A reception can include the following:

- Product pump
- Air elimination unit ASU
- Cooling section.
- Measuring device

Capacity: 10,000 – 60,000 l/h.

A Unitstaal solution provides:

- ◀ Fast, hygienic and safe milk reception
- ◀ Effective air removal and volume measurement
- ◀ Optional degree of automation

Unitstaal A/S is an established supplier of stainless steel units for the processing industry. Unitstaal is highly specialised within engineering and production, with 25 years of experience. Our customers are prominent companies within the food, medical and chemical processing industries in Denmark and on export markets. They set demanding requirements for us, which we satisfy, and we are known for high quality, delivery reliability and unique design. Our product range currently consists of a series of well-defined units, including CIP units, pasteurisation units with heat recovery, reception units, mixing systems and pilot plants.
